project
total building refurbishment

value
£ 1.75m electrical project

As you know, the pressure on the Service Centre accommodation at Port Sunlight was intense and to have been able to relocate such a business critical function as we did on time, within so closely a defined window and without any loss of customer service was a major business win for GIO-ES. For you to have then accepted the challenge of the accelerated programme for completion of the building and to have met such an exacting target was truly outstanding! From the GIO-ES perspective, the productivity gained by having the business under one roof for the first time and the consequential benefits to our customers were incalculable'.

Paul Cattrell (Facilities Co-ordinator)

project details

design of all electrical services

refurbishment and replacement of electrical services in building to create "accommodation" for 500 personnel

incorporation of building management system

LV power, lighting and emergency lighting including control panels
